## **MiX INSIGHT AGILITY**

The MiX Insight Agility Excel add-in files (found under the Measure > MiX Insight Agility menu), have been updated from exe file format to msi files.

All MiX Insight Agility users must please ensure they uninstall the current add-in on their computer first and only then install the applicable new msi file that will be available in MiX Fleet Manager release 23.10.

11.00.0d

We strongly recommend following this process to ensure that there will be no issues with previously created templates.

The implementation had to be updated to ensure uninterrupted use of MiX Insight Agility, following an announcement from AWS that the TLS configuration for all AWS service API endpoints will be updated, which would render the exe files unusable.

 Uninstall the MiX Insight Agility Excel ribbon by going to the "Apps & Features" or "Programs and Features" on your computer. You can either search for the Control panel or directly for the Add or remove programs option next to the Windows start button.

• Select either Programs and Features or Apps & Features as shown in the examples below:
